

AFYALINK

County Government Partnership

AfyaLink proposal deck

Platform themes

- Unified hospital administration, workforce, and operational control
- Clinical, diagnostics, pharmacy, billing, and continuity workflows
- Governance, observability, resilience, and interoperability readiness

County Government Partnership

AfyaLink

County Health Operations and Hospital Coordination Platform

Executive Summary

AfyaLink is a hospital operations and workforce platform built to improve how county health systems coordinate administration, staffing, patient flow, diagnostics, referrals, and reporting across facilities.

It helps county governments move from fragmented hospital processes to a more standardized, trackable, and scalable digital operating model.

We are seeking county-level pilot collaboration to deploy AfyaLink across selected facilities and strengthen service delivery performance.

1. Vision

To help county governments run more efficient, accountable, and connected health systems through a unified platform for hospital operations and workforce management.

2. County Health Challenges

County facilities often face:

- Fragmented administrative workflows
- Slow approvals and staffing coordination
- Limited visibility into queues, bottlenecks, and service delays
- Weak referral continuity between lower and higher-level facilities
- Inconsistent reporting across facilities
- Difficulty standardizing operational processes county-wide

These gaps reduce service quality and make health systems harder to manage at scale.

3. AfyaLink Solution for Counties

AfyaLink supports:

- Facility-level dashboards for day-to-day operations
- Hospital admin, HR, payroll, diagnostics, pharmacy, and patient-facing workflows
- Referral and transfer continuity patterns
- Government hospital registry and verification-friendly processes
- Training, readiness, and operational governance support
- Analytics foundations for cross-facility monitoring

4. County-Level Value

4.1 Standardized Hospital Operations

Creates repeatable operating workflows across county facilities.

4.2 Better Workforce Oversight

Improves staffing visibility, approvals, payroll coordination, and training readiness.

4.3 Better Service Delivery Monitoring

Enables clearer visibility into appointments, diagnostics turnaround, pharmacy linkage, and patient movement.

4.4 Stronger Referral Continuity

Supports smoother patient transfer and follow-up across hospitals and community teams.

4.5 Better Governance

Adds auditability, role controls, and operational evidence for accountability.

5. Example County Use Cases

- County referral hospital operations management
- Sub-county and county hospital coordination
- Staffing and approval workflows across facilities
- Lab, imaging, and pharmacy service monitoring
- Community follow-up and referral closure support
- Operational readiness and incident visibility
- County performance reporting and benchmarking

6. Key Capabilities

AfyaLink includes:

- Multi-role dashboard architecture
- Operational workflows across clinical and administrative teams
- Audit and route-governance patterns
- Launch readiness and training playbooks
- Offline operations monitoring support
- Observability and resilience planning assets

7. Implementation Model

Stage 1 — County Discovery

- Select pilot facilities
- Map top operational pain points
- Define workflow and reporting priorities

Stage 2 — Pilot Rollout

- Deploy in selected hospitals
- Train key users and administrators
- Track operational KPIs and adoption

Stage 3 — County Scale-Up

- Expand to additional facilities
- Standardize workflows across departments
- Introduce county command-center and benchmarking layers

8. Expected Outcomes

Projected outcomes include:

- Faster approvals and staffing coordination
- Improved patient throughput visibility
- Better referral and transfer continuity
- Reduced administrative fragmentation
- Stronger audit and reporting readiness
- Better county oversight across facilities

9. Partnership Request

We are seeking:

- County government pilot sponsorship
- Access to selected pilot hospitals
- Collaboration with county health leadership
- Workflow validation with facility administrators
- Support for phased rollout and training

10. Development Status

AfyaLink currently demonstrates:

- Role-based workflow coverage across major hospital functions
- Documentation for training, readiness, and governance execution
- Planning for continuity-aware interoperability
- Foundations for future advanced analytics and AI-assisted operations

11. Roadmap

- 2026 — County pilot launch
- 2027 — Multi-facility rollout and workflow standardization
- 2028 — County command-center analytics and broader health network integration
- 2029 — Replication across additional counties and healthcare groups

12. Closing Statement

AfyaLink offers county governments a practical path to modernize hospital coordination, workforce administration, and patient continuity through one operational platform.

We welcome the opportunity to partner on a county-level pilot and build a scalable digital health operations model together.
