Investor Pitch Deck

AfyaLink

Healthcare Operations Infrastructure for Africa

Executive Summary

AfyaLink is a healthcare operations platform that unifies hospital administration, workforce management, patient flow, diagnostics coordination, pharmacy workflows, reporting, and compliance controls in one product.

The platform is designed for hospitals and multi-facility healthcare groups that need operational visibility, role-based workflows, and interoperable continuity without stitching together many disconnected tools.

AfyaLink is positioned as digital infrastructure for healthcare delivery, not just a single-department application.

1. Vision

To become a leading healthcare operations platform for African hospitals and health networks by combining clinical workflow coordination, workforce systems, governance, and continuity in one scalable platform.

2. Market Problem

Healthcare providers face persistent operational fragmentation:

- Multiple disconnected systems for HR, operations, diagnostics, and care delivery
- Weak visibility into bottlenecks across departments
- Poor inter-facility continuity and follow-up coordination
- Compliance and audit burdens that grow with scale
- Limited software built for the day-to-day realities of African hospital operations

The result is slower patient flow, higher administrative load, and reduced operating efficiency.

3. Our Solution

AfyaLink provides one platform for:

- Hospital administration and branch oversight
- Staff registration, approvals, training, payroll, and workforce workflows
- Appointments, consultations, admissions, and departmental coordination
- Lab, pharmacy, radiology, therapy, and front-office flows
- Patient, referral, and community continuity support
- Audit, security, readiness, and observability controls

4. Why AfyaLink Wins

4.1 Role Depth

Supports a broad operational surface across admins, doctors, nurses, lab staff, pharmacy, HR, payroll, security, community health workers, and patients.

4.2 Workflow Breadth

Extends from workforce and administration to clinical operations and continuity workflows.

4.3 Built-In Governance

Includes readiness gates, auditability, access control patterns, DR planning, and operational verification assets.

4.4 Expansion Path

Can grow from single hospitals to groups, counties, and regional health networks.

5. Product Positioning

AfyaLink sits at the intersection of:

- Hospital management systems
- Workforce and HR management
- Care operations and patient flow
- Compliance and governance infrastructure
- Future AI-assisted healthcare operations

This gives AfyaLink both immediate workflow value and long-term platform potential.

6. Initial Customer Segments

- Private hospitals and hospital groups
- County referral hospitals
- Teaching hospitals and university medical centers
- Faith-based and NGO-supported health systems
- Multi-branch outpatient networks

7. Revenue Paths

Potential monetization includes:

- SaaS subscriptions per facility or group
- Implementation and onboarding packages
- Premium analytics and command-center modules
- Support, training, and change-management services
- Interoperability, reporting, and enterprise integration packages

8. Traction and Product Readiness Signals

Current AfyaLink build and documentation indicate:

- Broad multi-role dashboard coverage
- Deep workflow planning and execution registry
- Readiness, failover, and SRE-oriented assets
- Training and onboarding playbooks by role
- Interoperability and continuity design thinking
- Expansion hooks for AI-assisted workflows via NeuroEdge integration planning

9. Go-to-Market Strategy

Phase 1

Pilot with one to three hospitals and validate operational ROI.

Phase 2

Expand into hospital groups, county-level deployments, and teaching hospitals.

Phase 3

Layer analytics, command-center visibility, and AI-assisted operational tools.

10. Investment Use of Funds

We are seeking support to accelerate:

- Product hardening and deployment readiness
- Pilot implementation and onboarding
- Security, compliance, and interoperability maturity
- Customer success and field deployment operations
- Commercial growth and strategic partnerships

11. Why Now

Healthcare systems are under pressure to do more with limited staff, tighter oversight, and rising patient expectations.

Hospitals increasingly need operational platforms that unify workflows, not just digital record storage. AfyaLink is designed for that gap.

12. Roadmap

- 2026 — Pilot deployments and product hardening
- 2027 — Multi-facility expansion and recurring revenue growth
- 2028 — Advanced analytics, continuity scoring, and command-center products
- 2029 — Regional healthcare network expansion

13. Closing Statement

AfyaLink is building core healthcare operations infrastructure for hospitals that need better coordination, governance, and scalability.

We are looking for investors and strategic partners who want to back practical, high-impact digital health infrastructure for Africa.
