

AFYALINK

Kenya Ministry of Health Partnership

AfyaLink proposal deck

Platform themes

- Unified hospital administration, workforce, and operational control
- Clinical, diagnostics, pharmacy, billing, and continuity workflows
- Governance, observability, resilience, and interoperability readiness

Kenya Ministry of Health Partnership

AfyaLink

Integrated Hospital Operations, Workforce, and Patient Continuity Platform

Executive Summary

AfyaLink is a healthcare operations platform designed to connect hospital administration, clinical workflows, workforce management, diagnostics, pharmacy, billing, and inter-facility continuity in one system.

It brings together HRMS, hospital workflows, compliance controls, multi-role dashboards, and health-data interoperability so hospitals can reduce fragmentation, improve patient flow, and strengthen service delivery.

We are seeking partnership with the Government of Kenya and public health institutions to pilot AfyaLink as a digital operations backbone for hospitals, counties, and referral networks.

1. Vision

To help Kenya build a modern, interoperable, and locally adaptable digital health operations platform that improves care delivery, workforce efficiency, and accountability across public and private health facilities.

2. Problem Statement

Many health facilities still operate through fragmented systems and manual coordination, leading to:

- Delayed patient movement across departments
- Weak workforce scheduling and approval workflows
- Poor visibility into hospital performance and bottlenecks
- Fragmented lab, pharmacy, imaging, billing, and referral processes
- Limited continuity across hospitals and community follow-up teams
- Audit, compliance, and reporting gaps

Without a unified operational layer, hospitals lose time, revenue, and clinical coordination quality.

3. Our Solution — AfyaLink Platform

AfyaLink unifies hospital operations through:

- Role-based dashboards for admins, doctors, nurses, lab, pharmacy, HR, payroll, security, community health workers, and patients
- Appointment, consultation, admission, and referral workflows
- HR and payroll operations for healthcare teams
- Pharmacy, lab, radiology, therapy, and front-desk modules
- Audit logs, access governance, and readiness controls
- Interoperability support for structured exchange workflows including FHIR/HL7-aligned transfers

This creates one operational command layer for healthcare delivery rather than many disconnected tools.

4. Key Capabilities

4.1 End-to-End Hospital Operations

Supports patient flow from booking and reception to consultation, diagnostics, medication, follow-up, and transfer continuity.

4.2 Workforce and HR Management

Enables staff registration, approvals, leave flows, training readiness, payroll support, and performance visibility.

4.3 Multi-Hospital Administration

Supports hospital groups, branch-level oversight, and transfer-aware workflows for continuity between facilities.

4.4 Compliance and Control

Includes auditability, route access governance, feature controls, readiness gates, backup/failover planning, and operational evidence packs.

4.5 Offline and Resilience Readiness

Includes offline operations monitoring, operational drill support, and observability assets for resilient healthcare delivery.

5. National Strategic Value

5.1 Better Public Hospital Efficiency

Improves queue management, staff coordination, departmental throughput, and response times.

5.2 Stronger Patient Continuity

Supports better referrals, transfer packages, and follow-up visibility across facilities.

5.3 Workforce Accountability

Gives administrators clearer staffing, approvals, training, payroll, and audit visibility.

5.4 Digital Health Standardization

Helps establish repeatable hospital operating models that can scale county by county.

5.5 Local Adaptability

Built around Kenyan healthcare operational realities, including multi-role hospital workflows and low-friction administration.

6. Public-Sector Use Cases

- County referral hospital operations management
- National and county hospital workforce administration
- Public hospital queue and appointment optimization
- Pharmacy and diagnostics turnaround monitoring
- Community health worker follow-up coordination
- Government hospital registry and verification workflows
- Regulatory and operational reporting support

7. Security, Governance, and Readiness

AfyaLink includes:

- Role-aware access controls
- Audit logs and traceability
- Operational readiness gates
- Pre-production verification workflows
- Disaster recovery drill support
- Observability dashboards and alerting assets
- Consent-scoped and transfer-aware data continuity patterns

8. Pilot Deployment Proposal

Phase 1 — Pilot Hospitals

- One national referral hospital
- One county referral hospital
- One private or faith-based partner facility

Phase 2 — County Expansion

- Multi-facility rollout within selected counties
- Department-by-department onboarding
- Readiness, training, and compliance standardization

Phase 3 — National Network

- Wider public hospital adoption
- Inter-facility continuity and transfer exchange
- Operational benchmarking and command-center visibility

9. Expected Impact

Projected benefits include:

- Faster patient throughput
- Lower operational fragmentation
- Better staffing visibility and approval turnaround
- Improved diagnostics and pharmacy coordination
- More reliable referral continuity
- Stronger reporting and compliance readiness

10. Partnership Request

We are seeking:

- Ministry of Health pilot collaboration
- County health deployment partners
- Public hospital pilot sites
- Regulatory and interoperability guidance

- Innovation support for phased rollout and training

11. Development Status

AfyaLink currently demonstrates:

- Multi-role dashboard architecture
- Clinical and hospital-admin workflow modules
- Compliance/readiness automation assets
- Observability and DR support materials
- Interoperability planning for continuity and referral workflows
- AI integration groundwork through NeuroEdge-linked gateway documentation

12. Roadmap

- 2026 — Pilot deployment and workflow hardening
- 2027 — Multi-county operational rollout
- 2028 — National interoperability and command-center scaling
- 2029 — Regional expansion for East African healthcare groups

13. Closing Statement

AfyaLink represents an opportunity to modernize hospital operations in Kenya through a unified platform for workforce, care delivery, diagnostics, governance, and continuity.

We invite the Ministry of Health, county governments, and public institutions to partner with us in piloting and scaling this healthcare operations platform.
