

AFYALINK

Teaching Hospital / University Partnership

AfyaLink proposal deck

Platform themes

- Unified hospital administration, workforce, and operational control
- Clinical, diagnostics, pharmacy, billing, and continuity workflows
- Governance, observability, resilience, and interoperability readiness

Teaching Hospital / University Partnership

AfyaLink

Integrated Hospital Operations and Clinical Workflow Platform

University Research, Training, and Teaching Hospital Partnership Proposal

Founder Introduction

AfyaLink is being developed as a unified hospital operations platform that brings together healthcare workflow management, workforce administration, diagnostics coordination, patient continuity, and governance controls in one system.

It is well suited for teaching hospitals and university-linked healthcare environments where administration, care delivery, staff training, and operational reporting need to work together.

1. Project Overview

AfyaLink is a multi-module healthcare platform composed of:

- Frontend role-based dashboards
- Backend workflow and governance services
- Hospital administration and staff management tools
- Clinical flow modules for consultation, labs, imaging, pharmacy, and therapy
- Patient, community, and transfer continuity workflows
- Audit, compliance, observability, and readiness tooling

The platform is designed for complex healthcare environments with many user roles and departments.

2. Vision

To build a practical, scalable hospital digital operations platform that can serve teaching hospitals, university medical centers, and multi-facility health systems across Kenya and beyond.

3. Problem Statement

Teaching hospitals and university health environments often face:

- Fragmented administrative and clinical systems
- Slow coordination between departments
- Weak visibility into operational bottlenecks
- Limited training alignment across roles
- Poor continuity between inpatient, outpatient, diagnostic, and community workflows
- High reporting and compliance burden

As these institutions grow, disconnected tools make learning, service delivery, and operations harder to coordinate.

4. AfyaLink Solution

AfyaLink provides:

- Role-specific dashboards for each operational and clinical function
- Staff, approvals, training, and payroll workflows
- Appointment, queue, consultation, and patient tracking flows
- Diagnostics and medication coordination across departments
- Transfer, referral, and follow-up continuity support
- Governance, audit, and readiness controls for serious operational environments

5. Why This Fits Teaching Hospitals and Universities

5.1 Real Operational Training Environment

Students, interns, clinicians, and administrators can learn within realistic workflow structures.

5.2 Cross-Department Visibility

Supports better collaboration across wards, labs, pharmacy, imaging, and administration.

5.3 Research and Process Improvement

Provides a strong base for workflow analytics, service quality measurement, and operational innovation.

5.4 Digital Transformation Foundation

Can support institutional modernization without requiring separate systems for every team.

6. Potential University / Teaching Hospital Use Cases

- Teaching hospital administration and branch oversight
- Clinical workflow simulation and operational training
- Patient throughput and service quality analytics
- Internship and staff onboarding playbooks
- Department coordination for diagnostics and pharmacy
- Referral continuity across partner hospitals and community settings
- Applied research on hospital productivity and digital health operations

7. Platform Differentiators

AfyaLink emphasizes:

- Role depth across both clinical and non-clinical teams
- One-platform visibility for hospital operations
- Transfer and continuity thinking rather than isolated records
- Compliance, audit, and readiness-by-design
- Mobile and dashboard-oriented workflows for everyday users

8. Partnership Proposal

We propose collaboration with a teaching hospital or university in three stages:

Stage 1 — Discovery and Workflow Mapping

- Map current departments and top operational pain points
- Select pilot workflows and participating teams

- Define academic, clinical, and administrative objectives

Stage 2 — Controlled Pilot

- Deploy AfyaLink in selected units
- Train administrators and clinical users
- Monitor queue, turnaround, and workflow adoption metrics

Stage 3 — Institutional Scale-Up

- Expand to more departments and facilities
- Introduce analytics, continuity, and command-center features
- Build institutional case studies and research outputs

9. Value to the Partner Institution

Expected value includes:

- Better coordination across care and administration
- Improved training consistency across roles
- Stronger operational data for leadership decisions
- More efficient patient and staff workflow management
- A platform base for innovation, research, and digital transformation

10. What We Are Requesting

We are seeking:

- A teaching hospital or university pilot partner
- Workflow design collaboration with department leaders
- Access to non-sensitive process requirements for system shaping
- Joint innovation, validation, and case-study development support

11. Current Development Status

AfyaLink currently includes or documents:

- Broad role-based dashboard coverage
- Global feature and workflow registry planning
- Training playbooks by role
- Governance, readiness, and failover planning assets
- Interoperability-focused continuity design
- Foundations for future AI-assisted operations through NeuroEdge integration planning

12. Roadmap

- 2026 — Pilot with teaching hospital or university-linked facility
- 2027 — Expand to multi-department institutional deployment
- 2028 — Add deeper analytics, continuity scoring, and regional collaboration features
- 2029 — Replicate model across more academic and hospital partners

13. Closing Statement

AfyaLink can help teaching hospitals and university healthcare environments move from fragmented tools to a more connected operating model for care delivery, workforce coordination, and digital transformation.

We welcome the opportunity to pilot AfyaLink with an institution committed to healthcare innovation, training excellence, and operational improvement.
